

LOGICAL INFORMATION MACHINES **LIM**

Integration Acceleration

The Integration Acceleration offering is geared towards clients utilizing LIM APIs to populate downstream systems and applications, such as: OpenLink™, Allegro™, MATLAB®, S-PLUS®, Enterprise Data Warehouses or any others.

Our consultants continuously implement such integrations and have developed the expertise, templates, and reusable code that can be shared with clients to accelerate the implementation of such efforts.

The Integration Acceleration offering reduces the overall effort and cost of development and integration, as well as accelerates the development and delivery to meet aggressive timelines.

We offer a team of LIM expert consultants, at your location, to prepare your data and integration development teams through training, documentation and pre-built acceleration code. Roles and deliverables can be adjusted to client specifications. The typical duration for this offering is 2-5 days, and the expected ROI is over 300%. For more information on the tasks and deliverables for each of our expert consultants, see the reverse side of this brochure.

Project Manager

Integration Specialist

Data Specialist

Energy Business Expert

Financial Business Expert

Infrastructure Specialist

www.lim.com

Our expert consultants will train your team and provide acceleration code to launch your integration and development efforts in the most efficient and effective way, saving you time and money.

Project Manager

Tasks

- Requirements Review
- Project Plan & Methodology validation
- Deliverables oversight & status reporting

Deliverables

- Requirements Formalization
- Project Status
- Project Recommendations

Integration Specialist

Tasks

- Architecture Review
- API Training
- Best Development Practices Training
- Acceleration Code Development (API, BMIM, Java)

Deliverables

- API & Best Practices Documentation
- API Acceleration Code

Energy or Financial Business Expert

- Business Integration Analysis
- Business Integration Recommendations

Infrastructure Specialist

- Infrastructure Review
- Infrastructure Recommendations

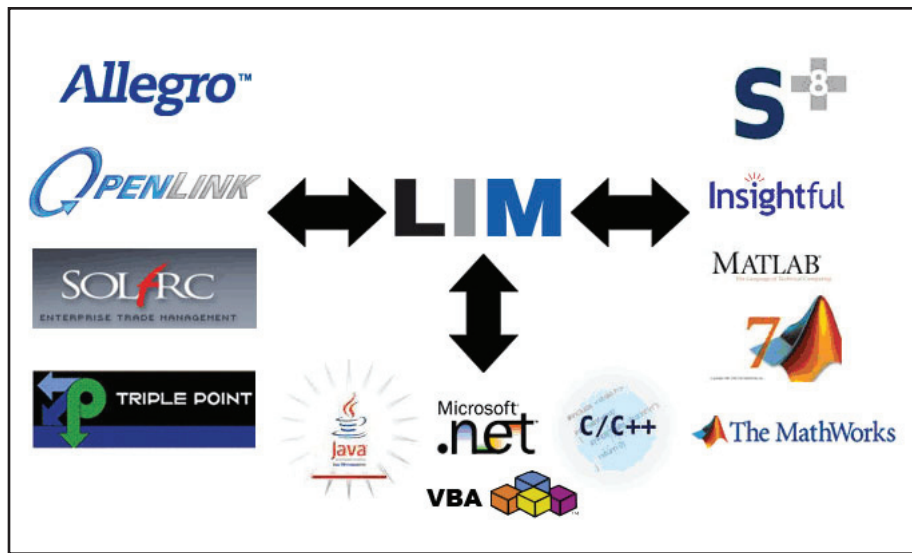

Data Specialist

Tasks

- Data Feed Review
- Data Feed Recommendations
- Query Language Training
- Acceleration Code Development (XMIM Query Language)

Deliverables

- XMIM Documentation
- XMIM Acceleration Code
